ART UNIT

PAPER NUMBER

2621

MAIL DATE

DELIVERY MODE

10/05/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/813,113	Applicant(s) YIM, KYEONG SU	
	Examiner GIRUMSEW WENDMAGEGN	Art Unit 2621	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 June 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-43 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-43 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/17/2009 has been entered.

Response to Arguments

Applicant's arguments filed 6/7/2009 have been fully considered but they are not persuasive.

Regarding claim 36, applicant argues that Kunii does not disclose or suggest "receiver configured to receive a radio frequency signal or an infrared signal corresponding to reservation-recording information via a reservation-recording key of a mobile terminal." However, examiner respectfully disagrees. Kunii discloses the send button (figure 40 element 363) is used to transmit an unattended recording preset command regarding TV program of interest to a personal computer or to VCR using **infrared transmission** as shown in figure 46 s95 (see paragraph 0257, fig. 46).

Regarding claim 19 and 26, applicant argues that Kunii does not disclose or suggest "the system is configured to transmit a radio frequency signal or an infrared

Art Unit: 2621

signal corresponding to a reservation-recording information from the mobile terminal to the recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information". Examiner respectfully disagrees. Kunii discloses transmitting infrared signal corresponding to reservation-recording information from mobile terminal (PDA) (see paragraph 0257, figure46).

Regarding claim40, applicant argues that Kunii does not disclose or suggest "a receiver configured to receive a radio frequency signal or an infrared signal corresponding to reservation-recording information via a reservation-recording key of a mobile terminal." Examiner respectfully disagrees. Kunii discloses a receiver (personal computer), receives infrared signal from the mobile terminal (PDA) (see figure46 s96, paragraph 0298).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim1-13, 15-29, 34-38 is rejected under 35 U.S.C. 102(b) as being anticipated by Kunii et al (Pub No US 2002/0122080).

Regarding claim34, Kunii et al (hereinafter Kunii) anticipated a method for reservation-recording a broadcasting program, the method comprising: storing broadcasting program information in a mobile terminal (see paragraph 0127); and transmitting a radio frequency signal or infrared signal corresponding to a reservation-recording information from the mobile terminal to a recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information (see paragraph 0257, see figure46 s95).

Regarding claim35, Kunii anticipates a method for reservation-recording a broadcast program using a mobile terminal, the method comprising: searching broadcasting program information in a mobile terminal (see paragraph 0127); and transmitting a reservation-recording information with a subscriber's IP address in a transmission packet form to perform power management of the recording apparatus and a reservation-recording the recording apparatus based on the reservation-recording information (see paragraph 0257), wherein a radio frequency signal or an infrared signal corresponding to the reservation-recording information is transmitted to the recording apparatus by selecting a reservation-recording key of the mobile terminal based on the searched broadcasting program information (see paragraph 0257, see figure46 s95).

Regarding claim36, Kunii anticipates recording apparatus, comprising: a receiver configured to receive a radio frequency signal or an infrared signal corresponding to a

Art Unit: 2621

reservation-recording information input via a reservation-recording key of a mobile terminal (see paragraph 0257, see figure 46 s96); and an event timer configured to store the reservation-recording information and perform reservation-recording at a preset reservation time based on the reservation-recording information (see paragraph 0257).

Regarding claim 37, Kunii anticipates the recording apparatus of claim 36, wherein the event timer turns on power of the recording apparatus at the preset reservation time based on the reservation-recording information (see paragraph 0257).

Regarding claim 38, Kunii anticipates the recording apparatus of claim 36, wherein the event timer comprises a non-volatile memory (see figure 7).

Regarding claim 1, Kunii anticipates the method of claim 34, comprising: downloading program information before storing the broadcast program information in the mobile terminal (see paragraph 0127, downloading TV program information); converting the stored broadcasting program information into data information to be displayed on a screen of the mobile terminal and outputting the data information to the screen of the mobile terminal (see figure 25 and paragraph 0235); and performing the reservation-recording by receiving a user's input via the reservation-recording key of the mobile terminal based on the searched broadcasting program information (see paragraph 0127).

Regarding claim2, the method of claim1, wherein performing the reservation-recording includes transmitting the reservation-recording information to an event timer of the recording apparatus in response to the input of the reservation-recording key of the mobile terminal (see paragraph 0281-0291) ; and storing the transmitted reservation-recording information in the event timer of the recording apparatus, operating the event timer era-at a preset reservation time based on the reservation-recording information thereby turning on a power of the recording apparatus, and performing-a the reservation-recording (see paragraph 0281-091).

Regarding claim3, Kunii anticipates the method of claim 1, wherein in performing the reservation-recording, the broadcasting program information selected by a user among the displayed broadcasting program information is wirelessly transmitted to the record apparatus (see page17 paragraph 0291).

Regarding claim4, Kunii anticipates the method of claim 1, wherein in downloading the broadcasting program information and storing, the broadcasting program information is downloaded through a broadcasting program data service provider's Internet homepage (see page10 paragraph 0177).

Regarding claim5, Kunii anticipates the method of claim 1, wherein in downloading the broadcasting program information and storing, the broadcasting

Art Unit: 2621

program information is directly downloaded from a broadcasting receiver where broadcasting program information is stored (see page11 paragraph 0190).

Regarding claim6, Kunii anticipates the method of Claim 1, wherein in outputting the data information to the screen, icons are generated on the basis of the stored broadcasting program information and displayed on the screen (see figure23-25 and page2 paragraph 0038).

Regarding claim7, Kunii anticipates the method of claim 6, wherein if one of the displayed icons is selected, broadcasting channel information, broadcasting time information, and broadcasting program information according to each channel and time are displayed in a list form (see figure 25).

Regarding claim8, Kunii anticipates the method of claim 7, wherein in performing the reservation-recording, when a user selects an arbitrary broadcasting program, broadcasting channel information and broadcasting time information corresponding to a title of the selected broadcasting program are displayed enlarged (see figure29), and a guide message inquiring whether the information is to be set as the reservation recording information is displayed (see figure 37).

Regarding claim9, Kunii anticipates the method of claim 1, wherein in providing for searching of the broadcasting program information, if an electric program guide

Art Unit: 2621

(EPG) is provided as the broadcasting program information, a channel is set by inputting an up/down key of the mobile terminal when the channel inside the EPG is highlighted (see figure 29).

Regarding claim10, Kunii anticipates the method of claim 9, wherein in providing for searching of the broadcasting program information, a software channel management for the broadcasting program information is provided to the mobile terminal to compare a channel set by a user with channel information of the program guide and to perform a channel search among substantial active channels (see page10 paragraph 0181).

Regarding claim11, Kunii anticipates the method of claim 1, wherein the mobile terminal downloads broadcasting program information through a broadcasting receiver that receives broadcasting program information, stores the broadcast program information in a memory, and performs a search and the reservation-recording of the broadcasting program information (see page7 paragraph 0127).

Regarding claim12, Kunii anticipates the method of claim 1, wherein the mobile terminal accesses to a wireless Internet network through a mobile communication module to download a broadcasting program from a broadcasting program service provider's Internet homepage and store the program in a memory, and then performs a search and the reservation-recording of the program (see Page10 paragraph 0177 and page14 paragraph 0242-0244).

Regarding claim13, Kunii anticipates the method of claim35, further comprising: transmitting the packetted reservation-recording information to a subscriber's server through a wireless Internet network (see page17 paragraph 0288)

Regarding claim15, Kunii anticipates the method of claim 13, wherein in performing the reservation-recording, the reservation-recording information is stored by an event timer including a non-volatile memory, a power of the recording apparatus is turned on at a preset reservation time of the broadcasting program on the basis of the reservation- recording information, and a reservation-record is performed (see page14 paragraph 0242-0244 and figure39 element 363).

Regarding claim 16, Kunii anticipates the method of claim 13, wherein the transmission packet includes a packet header that informs of a data content, a subscriber's code that informs of subscriber's information, the reservation-recording information, and the subscriber's IP information(see page5 paragraph 0093).

Regarding claim17, Kunii anticipates the method of claim 16, wherein the reservation-rec0rding information includes channel information that performs the reservation-recording, time information regarding reservation start time and reservation finish time, and category information including a program list (see page14 paragraph 0242-0244).

Regarding claim 18, Kunii anticipates the method of claim 13, wherein the transmission packet includes a packet header that informs of a data content, the subscriber's mobile terminal information, the reservation-recording information, and modem information when the recording apparatus is connected to the Internet by a telephone wire (see page 5 paragraph 0093).

Regarding claim 19, a broadcasting program reservation-recording system using mobile terminal, the system comprising: a CDMA module provided with a mobile communication module that receives broadcasting program information (see figure 1 paragraph 0080) ; a remote communication controller that exchanges data with a recording apparatus or performs a wireless communication in order to control the recording apparatus (see paragraph 0125) ; a storage device that stores broadcasting program information received through the CDMA module and control data for the recording apparatus received by the remote communication controller (see paragraph 0127); a controller that converts the broadcasting program information stored in the storage device into data information of a suitable form to be displayed and output (see figure 5 element 81); and a display device that displays data information regarding the broadcasting program information output from the controller on a screen (see figure 5 element 31) , wherein the system is configured to transmit a radio frequency signal or an infrared signal corresponding to a reservation-recording information from the mobile terminal to the recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording

Art Unit: 2621

apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information (see paragraph 0257, see figure46 s95).

Regarding claim20, Kunii anticipates the system of claim 19 further comprising a key input device that receives a user selection of the data information displayed on the screen (see figure5 element 32 and 48).

Regarding claim21, Kunii anticipates the system of claim 19, wherein the controller comprises: a CPU that generates icons for searching or controlling the broadcasting program information based on the data stored in the storage device and outputs the generated icons on the screen of the mobile terminal (see figure4 element 41); and a companion chip that controls an operation of the remote communication controller through an interface with the CPU (see figure4 element 22 and 64).

Regarding claim22, Kunii anticipates the system of claim 19, wherein the controller sets an arbitrary broadcasting program selected by a user among the broadcasting program information displayed on the display device in the recording apparatus as the reservation- recording information (see figure 29 and 39).

Regarding claim23, Kunii anticipates the system of claim 21, wherein the remote communication controller comprises: a remote control module that outputs a remote control signal in response to a remote control command for the recording apparatus

Art Unit: 2621

provided from the companion chip connected to the CPU (see page6 paragraph0120); and a transmitter/receiver that performs a wireless data communication link with the recording apparatus by receiving the remote control signal from the remote control module (see page6 paragraph0120).

Regarding Claim24, Kunii anticipates the system of claim 23, wherein the transmitter/receiver comprises: an infrared transmitter and an infrared receiver (IR transmitter/receiver) for that provides an infrared wireless data communication link; and a radio frequency data communication link (RF transmitter/receiver) that provides a high frequency wireless data communication link (see figure 5 element 22, 53 and 64).

Regarding claim25, Kunii anticipates the system of claim 19, wherein the display device comprises: video controller (see figure5 element 87); an audio codec (see page6 paragraph 0121); a liquid crystal display (LCD) screen (see page6 paragraph 0117); a speaker and a microphone (see figure5 element 50).

Regarding claim26, Kunii anticipates a broadcasting program reservation-recording system using a mobile terminal ,the system comprising: a service center that provides broadcasting program information (see figure1 element 14 and figure10); a mobile terminal that allows for searching of a broadcasting program by downloading broadcasting program information from the service center and that transmits a radio frequency signal or an infrared signal corresponding to a reservation-recording

Art Unit: 2621

information from the mobile terminal to a recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information (see paragraph 0127; 0257, see figure46 s95); and the recording apparatus that reservation-records the broadcasting program provided from the Service center based on the output reservation-recording information received from the mobile terminal (see page17 paragraph 0291).

Regarding claim27, Kunii anticipates the system of claim 26 further comprising a mobile communication station that provides a wireless communication device between the service center and the mobile terminal (see figure1 element 2).

Regarding claim28, Kunii anticipates the system of claim 26, wherein the service center includes information of the mobile terminal and Internet access information of the recording Apparatus (see page5 paragraph 0093).

Regarding claim29, the system of claim 28, wherein the internet access information includes IP address information of the recording apparatus when the recording apparatus is connected to the Internet by an Ethernet, and includes telephone number information when the recording apparatus is connected to the internet by a telephone wire (see page5 paragraph 0093).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim14, 30-33, 39-43 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kunii et al (Pub. No. US 2002/0122080) as applied to claim1-13 and 15-29 above and further in view of Atkinson et al (Patent no US 6,760,850).

Regarding claim14, 30, see the teaching of Kunii above. Kunii does not teach the recording apparatus is provided with a wakeup LAN module thus to turn on the recording apparatus at the time of a data communication request from outside. However Atkinson et al (hereinafter Atkins0n) teaches using wakeup LAN to turn on/off power of a device (see figure3 and column7 line 35-53).

Regarding claim40, Kunii teaches a receiver configured to receive a radio frequency signal or an infrared signal corresponding to reservation-recording information (see paragraph 0298, figure4 s96) but does not teach the recording apparatus is provided with a wakeup LAN module thus to turn on the recording apparatus at the time of a data communication request from outside. However Atkinson et al (hereinafter Atkins0n) teaches using wakeup LAN to turn on/off power of a device (see figure3 and column7 line 35-53).

Art Unit: 2621

One of ordinary skill in the art at the time the invention was made would have been motivated to use wakeup on LAN as in Atkinson in to Kunii system because it would allow the recording device to save power by keeping it off when it is not in use.

Regarding claim 31, 41, Atkinson teaches the system of claim 30, wherein the wakeup LAN module comprises: a system bios device including control information that controls a power of the recording apparatus (see column 7 line 4-12); a physical layer unit for performing an interface with the system bios unit in response to the data communication request from outside (see figure 3 element 218); and a backup battery for providing a power to the physical layer unit and the system bios unit (see figure 3 element 318).

Regarding claim 32, 42, Atkinson teaches the system of claim 31 further comprising a power controller that turns on/off power of the recording apparatus based on the power control information of the system bios device (see figure 3 element 304 and 322).

Regarding claim 33, 39, 43, Atkinson teaches the system of claim 31, wherein the system bios device includes a power management logic device that stands by with an operation-enable state by receiving a minimum power from the backup battery (see column 7 line 63-67).

Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, absent unexpected results to the contrary.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GIRUMSEW WENDMAGEGN whose telephone number is (571)270-1118. The examiner can normally be reached on 7:30-5:00, M-F, all Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tran Thai can be reached on (571)272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
